

Determining weight of bulk goods

Your advantage:

- Legal for trade class III & IIII up to 40t
- Weighing can be done everytime and everywhere
- No detours to stationary weighbridges necessary
- Comfortable reading of unloaded quantity on LCD display
- Customer will be sure to get what he will pay
- Supplier will be sure to charge the correct quantity
- Branch specific accessory options available for efficient work
- Fleemanagment gives transparency in orders and truck routes
- Telemeatics give immediate invoiceing capability from office

Typical applications:

- Weighing of wooden pellets transported with silo trucks
- Weighing of cereals / flour in silo trucks
- Weighing of animal food transported with silo trucks
- Weighing of granulate for industrial purposes in silo trucks
- and many more...

Scale independent of product

Using the onboard truck mounted body scale from Krickl Weighing Solutions GmbH you will be able to determine the weight of unloaded goods directly at the customer. The loopway to a stationary weighbridge is no more necessary. Silo trucks are perfect for installing the fixed onboard body weighing system. Determining the weight can take place everytime and everywhere at the customer and is independent of the loaded good.

The truck is filled to the limit in advance to the tour start. The effective unloaded quantity of your delivered good will be determined directly at the customer. The depot of the customer can be filled according to real demand or up to the max.

This results in more profit by saving transportation cost and efficient usage of your fleet.

KWS – Everything from one hand

Weighing precisely is the main thing - userfriendly operation is the most important minor matter.

Invoice / pressure

Our invoicing module will create legal invoices including VAT and separately listed delivery charge directly at the place of customer

The pressure protocol module records the air pressure of the silo during unloading and generates a prove of quality with a pressure histogram over time or an average pressure after delivery

Remote control

Equipped with a backlit LCD display which displays the actual weight of our onboard / truck mounted scale, the remote control offers up to 8 independent and programmable switching channels to control the delivery process. The high wireless operation range allows the operator to remain at the depot (typically in basement) but continuously monitor the unloaded weight

Secondary display

You can comply the wish of customer to monitor the delivery process with our secondary display. with big and luminous digits the current weight of the unloading process is displayed. The customer can follow the process weightwise

USB data storage

Ideal suitable for customers with smaller truck fleet, the USB stick offers a simple solution to create a weighing day protocol in tabular style. The recorded data, stored in CSV format can be easily processed in the office and by using a software import filter it is possible to upload the weighing data into your ERP solution for automatic client invoicing

Data transmission

By using our serial simplex interface of the weighinterminal you can easily connect and transmit the weighing and customer data to the onboard computer or other onboard fleet and telematic solutions. Via our dedicated partner companies we can offer branch specific solutions for GPS / GPRS supported data transmission including order management

Printer

The most simple solution of recording weight and order related data is for sure the use of robust dot matrix printers which generate an unforgettable and UV resistant printout. Our slip printer accepts ready made customer specific documents to be printed on while our bon printer generates a small stripe of paper which is similar to an ordinary receipt
